Having a wood energy system near wood products manufacturers who generate large amounts of wood waste might favor low wood fuel costs. Conversely, if harvesting and transportation costs are more expensive than expected (and wood fuel was available only at 50 or more per ton), this would result in less favorable project economics than in the current evaluation. The analysis was based on operating conditions typical to public facilities such as schools, which would be operating about 240 days per year (8 months). For facilities operating year-round, shorter payback periods would be expected because there would be no change in the original capital investment, but the economic benefits...
