

Mines and Mineral Resources of Plumas County

By Errol Macboyle

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 edition. Excerpt: . basalt, representing an interval of volcanic channel later than the Tertiary gravel channels. A small patch of Tertiary gravel occurs at American House, in the Bidwell Bar quadrangle. This deposit, lying in a sag 800 above Salt Creek, probably represents a tributary of the main La Porte channel. A capping of basalt covers the Calaveras bedrock east of the gravel patch. The bedrock to the west is amphibolite. On both east and west the bedrock rises several hundred feet, showing the old river valley. A considerable body of white quartz gravel underlies the alluvium deposit in Little Grass Valley, two miles northwest of Bald Mountain. This has been much exploited by shallow shafts, but, being lower than the South Fork Feather River, because of excess water it can not be profitably mined. The gravel is not thoroughly rounded, thus resembling that at La Porte and...
