Nephroptosis or movable kidney has also been called prolapse of kidney, ectopia of kidney, floating kidney, mobile kidney, dislocated kidney, loose kidney. A good term for it is dropped kidney, the kidney is loose and drops when the patient assumes the erect position. This term reminds the examiner that to be sure about the diagnosis the patient should be examined in the erect position. The only term that seems to cover all cases is the term dislocated. The kidney may be loose and rotated, a most serious condition in which it is not dropped or fallen. The term movable may be objected to, as the kidney moves in health. But the normal kidney only moves half an inch with the respiratory movements, it is taut and can not be moved by pressure of the finger and the outflow of urine is not interfered with. In considering ptosis of the abdominal viscera I must confine myself to ptosis of the kidneys. In the future I have no doubt gastroptosis, coloptosis, and ptosis of other organs will be inquired into, but in my practice as a neurologist, nephroptosis has quite overshadowed Glenard s disease. For one case of the latter I see a thousand cases of nephroptosis. Nephroptosis is the first stage and leads to Glenard s disease, but only rarely. Rotated movable kidney is a very important and serious condition. The kidney is loose and its lower pole turned inwards, the hilus of the kidney being...
