The stopcock i is again opened and the leveling bottle lowered to the lowest division on the burette. The stopcock i is then closed and the gas in the burette is measured at atmospheric pressure by holding the leveling bottle in such a position that the surface of the water in the bottle is on line with the water in the burette. About two minutes is allowed for drainage of water down the sides of the burette before the measurement is taken, in order to guard against a small error which would otherwise ensue. After measurement the sample is passed into pipette a several times by raising and lowering the level bottle; this operation removes the carbon dioxide, the solution in a is then brought exactly to the mark on the capillary stem,...
